## True Light Middle School of Hong Kong

You may have been told you need an education if you want a good career. But learning is about a lot more than that. It shapes how we think, interact with others, and generally go about our lives.

Recently, our class attended a science forum where we heard from four speakers how different ways of learning can benefit us and how we can apply

**Prof Tsui Lap-chee, one of the speakers**

what we've learned to the real world. The speakers, all of whom chose careers in sciences, talked about how their scientific skills come in handy in other aspects of their lives. One such skill is critical thinking. Scientists need to think critically, but so do the

rest of us! Whether we're reading the news, watching TV, visiting a new country or sitting an exam, we can approach all these things with a critical mind.
